Source of occupation titles and labor data is from the U.S. Bureau of Labor Statistics'

Occupational Outlook Handbook. Data comprises projected percent change in employment over the next 10 years; nation-wide employment numbers; and the yearly median wage at which half of the workers in the occupation earned more than that amount and half earned less.

Description

The Master of Healthcare Design degree is a post-professional degree and one of the very few in the country focusing on the design of healthcare facilities. The MHCD program equips students with the knowledge and skills required to design spaces that are conducive to safety, satisfaction, and efficiency for all end users, including patients, staff, and caregivers. The MHD program is also designed for those

professionals who want to have a deeper understanding of not just healthcare design, but of other drivers of healthcare innovations such as public policy, reimbursement, emerging technologies and what patient-centered care really means from the perspective of patients and families.

Upon graduation, our alumni are employed in healthcare-focused architecture and design firms. Kent State University's Healthcare Design program is also a member of the AIA's Design & Health Research Consortium.

Program curriculum is diverse by complementing required courses with electives from Colleges of Public Health, Nursing, and beyond. Connecting with professionals in the field is one of the core missions of the program, expanding students' network and exposure to real-world projects.

To earn the degree, students must complete a master's project by designing a healthcare environment of their choice. Students will develop research-based design guidelines for their individual projects to guide their designs. The program takes one and a half or two years to complete, depending on course load.
