## Mission of the College

The College of Communication and Information is the only one in the nation that offers degree programs from five distinct but interrelated fields of study – media, design, communication, information and digital technologies.

Students want to pursue their interests and engage with their talents – and the college is here to help them do just that. The evolution of digital and electronic media has blurred the distinctions among communication and information disciplines. With degree programs in the most relevant fields today and a range of interdisciplinary courses, students will be prepared for the new information and digital media landscape. Whether students are designers, public speakers or tech experts, the cross curricular majors and minors in the college will help them develop the media, advocacy, web and design skills to succeed and grow – and still graduate on time.

**CCI 40389 DOCUMENTARY FILMMAKING (DIVG) (ELR) 3 Credit Hours**

Documentary Filmmaking is a course characterized by the co-existence of theory and practice and the balance between the two. The theoretical aspect of the course has the purpose of providing information about general basics of film language, film history and the history of documentary filmmaking. It will provide the students the tools for being able to talk about ideas in terms of film language, through the analysis of existing documentaries and exercises shot by the students themselves. Without a good theoretical base, it would be difficult to find the right kind of themes, voices, styles and development. The practical aspect of the course is focused on teaching the students the use of technical equipment including still-cameras, video-cameras, lights, audio tools and post-production software. The course will be focused mainly on European Documentaries as a way of teaching the thematic and political difference between the cultures of the two continents. The combination of the theoretical and practical aspects will generate a solid base for the micro-production of well planned documentaries, which the students will develop, shoot, edit and screen.

Not only is data from electronic medical records (EMRs) growing at a rapid pace but new types of data are available for analysis, such as, genomic data and patient generated data. These advanced analytic tools break down into three areas, each of which will be examined in this course: new data warehousing techniques to manage big data, new analytic tools including cognitive computing and predictive analytics and new ways to visualize the data. All of these techniques transform the raw data into use cases, such as, population health, precision medicine and clinical decision support using artificial intelligence and machine learning which will also be addressed in this course.

**HI 80411 CLINICAL ANALYTICS 3 Credit Hours**  
(Slashed with HI 60411) The use of well-defined and well integrated clinical analytics throughout the healthcare value chain can be transformative. Through careful implementation of health analytics, hospitals can transform unwieldy amalgamations of data into information that can: Improve patient outcomes, increase safety, enhance operational efficiency and support public health. Given the immense size of the data challenge, the distinctness and geographic spread of many healthcare-related activities, and the fact that so many healthcare activities are conducted by different entities which must interact with each other, there is really no other way to provide operations management tools necessary to deliver personalized medicine and to control spiraling costs. Since clinical analytics is an immature discipline, we carefully examine the practices of those institutions that are standard setters in the industry.
