## Description

The Bachelor of Business Administration degree in Economics equips students with a variety of skills sought by employers, including conceptualizing and solving problems; locating, organizing and using relevant information; and analytical ability.

In their junior year, students learn microeconomic and macroeconomic theory and take an econometrics class to learn basic analytical skills. Students then take a series of electives that deal with vital current topics relevant to many careers in which these theories and skills are applied, such as U.S. financial and banking system; the economic relations between the United States and foreign countries; government spending and taxation policies; and the U.S. health system and policy options.

During their senior year, students take a capstone course that utilizes and applies the theory, skills and institutional knowledge learned in the program.

Economics students may apply early to either the M.B.A. degree or the Master of Arts in Economics degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program policy in the University Catalog for more information.

## Finance - Minor

### College of Business Administration

Department of Finance

404 Business Administration Building

Kent Campus

330-672-2426

finance@kent.edu

www.kent.edu/business/finance

### Description

The Finance minor allows students to gain some familiarity with financial management, as well as with the financial system of institutions and markets in which firms must operate. Some knowledge of finance is necessary to understand and work in most businesses and organizations. Profits and value creation are the "bottom lines" to which companies direct their efforts. Some acquaintance with investment techniques may help students in managing their personal finances.

The Finance minor is particularly useful for business students in other majors who take the requisite courses, and for other students who desire to acquire some understanding of finance without having to take all the core business school requisites. Both groups are exposed to important fundamentals, yet they also will have the flexibility to consider several areas of finance.

### Fully Offered At:

- Kent Campus

## Admission Requirements

Admission to a minor is open to students declared in a bachelor's degree, the A.A.B. or A.A.S. degree or the A.T.S. degree (not Individualized Program major). Students declared only in the A.A. or A.S. degree or the A.T.S. degree in Individualized Program may not declare a minor. Students may not pursue a minor and a major in the same discipline.

To declare the Finance minor, students must have a minimum 2.500 overall Kent State University GPA. No Kent State University GPA is

required if the student is a first-semester freshman or transfer student admitted in good standing.

## Description

### Admission to the Information Systems and Supply Chain Management concentrations have been temporarily suspended as of fall 2020.

The Master of Business Administration degree prepares students for responsible leadership positions in public, private and nonprofit organizations. Regardless of their undergraduate education, students will find a challenging program designed to meet their specific backgrounds and needs.

The degree is structured for full-time and online students:

- The full-time program is targeted to early career professionals, both national and international, who wish to jump-start their business career, and to those who wish to make a business-related career change. The program operates in cohorts so that students proceed through the sequence of required courses as a group. Students take six to seven courses a semester (offered in eight-week modules) and are expected to participate in experiential activities such as internships, mentoring and case competitions. Delivery of the program is accelerated; students will be able to earn the M.B.A. degree in 12 to 16 months.
- The online program is designed for working professionals who intend to keep working full-time while pursuing the M.B.A. The program is offered fully online for students selecting specific optional concentrations.

The Business Administration major includes the following optional concentrations:

- The **Accounting** concentration allows students to specialize their degree with courses in managerial and financial accounting, business

valuation using financial statements and international accounting. Completion of this concentration is not sufficient to sit for the CPA exam in Ohio unless the student has an undergraduate accounting major.

- The **Business Analytics** concentration allows students to gain the technical, analytical, communication, decision-making and leadership skills needed to glean useful information from data to make strategic business decisions.
- The **Economics** concentration allows students to specialize their degree with advanced topics in various areas in economics.
- The **Finance** concentration allows students to specialize their degree with advanced courses in investments, financial markets and institutions, real estate and other related areas.
- The **Human Resource Management** concentration allows students to specialize their degree with advanced topics in employee selection and appraisal, organizational analysis and the opportunity for real-world applications.
- The **Information Systems** concentration allows students to specialize their degree with advanced topics in database management systems, emerging hardware and software technology and other related area courses.
- The **International Business** concentration allows students to specialize their degree with courses in accounting, marketing, finance and strategy with an international focus. Study abroad options are possible, with no language skills required.
- The **Supply Chain Management** concentration allows students to specialize their degree in vendor-customer relationships and logistic matters, with courses in global supply chain management, supply chain business models and vendor management strategies.

Students have the opportunity to complete a combined degree program with the D.P.M degree in Podiatric Medicine and the M.B.A. degree in Business Administration. A separate application must be submitted for each program. Students can view admission requirements for each program on their respective catalog page.

Several dual degree programs with the M.B.A. degree are possible, including the following.

## Computer Information Systems - B.B.A.

### College of Business Administration

Department of Management and Information Systems

A432 Business Administration Building

Kent Campus

330-672-1140

mis@kent.edu

www.kent.edu/business/mis

## Description

The Bachelor of Business Administration degree in Computer Information Systems provides students with a focus on the creation and supervision of the information systems that are commonly used in organizations of all types and sizes. There is a primary emphasis on problem-solving involving cloud computing systems and infrastructure, creating intuitive systems, business modeling and agile design, data management and business intelligence, cloud systems integration and project management and business experience.

Examples of information systems include airline reservation systems, mobile apps, bank automated teller systems, trading systems for stock exchanges, social media platforms and accounting/auditing systems.

Students can select electives to complement their knowledge base and interests such as in application design and development and other computing infrastructure that focus on the creation and maintenance of application used in smart phones and similar technologies and prepares students for careers as development engineers and system analysts. Students learn to use and manage cloud-based platforms to support and manage business processes and operations in organizations. Some material taught in courses correlate with the knowledge needed to pass professional certification exams.

Students participate in an internship, which involves a summer or a semester of paid professional experience in industry. Internship

experience helps show the relevance of on-campus courses to professional work, helps students focus their career plans and often enables students to secure better jobs upon graduation.

Computer Information Systems students may apply early to the M.B.A. degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program policy in the University Catalog for more information.

## Description

The Human Resource Management minor focuses on the competitive advantage derived from the more effective use of human resource management policies, practices and procedures. The minor is relevant to a variety of students who want to learn to better manage a company's human resources in many positions after graduation, including line managers who need to implement human resource policies as they hire and manage the performance of their employees; entrepreneurs who need a fundamental knowledge of human resources management to run their companies more effectively; and members of not-for-profit organizations who need to understand the basics because they rarely are able to hire human resources staff.

The Human Resource Management minor covers a range of topic areas taught from both theoretical and applied perspectives. Students are exposed to a wide array of human resource functional areas, including staffing, performance management, training, compensation, human resource information systems and employer-employee rights and responsibilities.

**Description**

The International Business minor introduces students to cultural issues of a broad, global nature. Students are encouraged to participate in study-abroad programs to complement their studies. Global business is fast becoming an important part of the U.S. economy. The world that college graduates are facing will essentially be a borderless world. This suggests a need to be trained for employment that will have international implications. Whether students take a major in business, fashion design and merchandising, the hard sciences, English or education, some training in global outreach, cultural diversity and 'business cultures' will be necessary.

## Description

The Bachelor of Business Administration degree in Entrepreneurship provides students with the academic background and experiential opportunities needed to view business opportunities from an entrepreneurial perspective. The program helps students recognize market and business opportunities and learn when to seize them or take action, all while operating within the context of limited resources and creating value for the customer.

The program contains numerous opportunities to experience entrepreneurship firsthand. During their senior year, students earn course credit by launching and running a business of their own creation. A practicum can earn students credit while developing their own business

or assisting entrepreneurs with their business. Students have many opportunities to meet experienced entrepreneurs who discuss their successes and failures in business. Courses in the major are hands-on, with experiential learning central to the course format.

Entrepreneurship students may apply early to the M.B.A. degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program policy in the University Catalog for more information.

## Description

The Bachelor of Business Administration degree in Managerial Marketing prepares students to be marketing practitioners by helping them to fully develop the analytical, decision-making and communications (written and oral) skills used and valued by individuals working in this field. Faculty engage each student in active learning through hands-on assignments, case studies, projects with real businesses, and dynamic interactions with the faculty member and other students in the classroom. Each course aims to strengthen writing skills by emphasizing logical flow, persuasiveness and succinctness. Because coursework is sequential and integrated, each course builds upon prior classes to give students a comprehensive body of knowledge, skills and abilities.

The objective of this program is to educate students to function effectively in business environments where they will have to make autonomous decisions and be required to take action on their own initiative.

Managerial Marketing students may apply early to the M.B.A. degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program policy in the University Catalog for more information.

## Description

The Bachelor of Business Administration degree in Marketing provides a general approach that can be applied in a wide range of areas of business (e.g., for profit, nonprofit, service and manufacturing). The program addresses the breadth within the marketing field through courses (e.g., consumer behavior, marketing research, international marketing, personal selling, advertising and promotion management) that provide the student with an appreciation of all central topic areas in the field.

The program gives students a generalist's perspective and working knowledge of the theory and practice of marketing. Students learn the tasks involved in the analysis, planning, implementation and control of marketing programs that result in strategies and tactics used by businesses to sell products to consumers and other businesses. Typically, a traditional lecture format is used by instructors in this program.

Marketing students may apply early to the M.B.A. degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program policy in the University Catalog for more information.

The disciplines represented within the College of Communication and Information emphasize different aspects of communication and information theory, research, use and practice. Yet, they all focus on the elements and means of creating, managing, using and evaluating messages, and on information components and processes that are central to communication interaction.

The evolution of digital and electronic media has blurred the distinctions and narrowed the traditional differences between and among communication and information disciplines. The College of Communication and Information provides a coherent and unified structure for the cohesive, collaborative and convergent study of human interaction and information design, production, processing, management, exchange and evaluation, while retaining the unique perspectives and content foci of programs within each of the constituent schools.

The college links programs with a pedagogical and research interest in new technology for information and communication uses, distribution and content. In addition, the School of Communication Studies houses the Communication Instructional Resource Lab and the Communication Research Center. The School of Journalism and Mass Communication houses two centers: the Center for Scholastic Journalism and the Media Law Center for Ethics and Access. The School of Information houses the Center for the Study of Librarianship and the Center for the Study of Information and Religion. In partnership with regional, national and international businesses and organizations, the School of Visual Communication Design engages in multidisciplinary research focused on socially responsible design concepts.

## Description

The Bachelor of Arts degree in Communication Studies prepares students with the knowledge, skills, and abilities to succeed in a technological, multicultural and global environment. Our mission is to teach students to think analytically, reason critically, communicate effectively, and lead responsibly. We strive to develop communicators who are adaptive and ethical citizens who will thrive in the workplace, in the community, and in careers in government, business, non-profit, and education. We strive to understand how communication affects identities, communities, and cultures. We offer hands-on skill development opportunities to prepare students for meaningful and fulfilling careers.

The Communication Studies major comprises the following concentrations:

- The **Applied Communication** concentration offers an interdisciplinary program of study in which students gain expertise in organizational communication, advanced presentational speaking, professional writing and visual design. Students are trained to integrate theoretical knowledge and technical skills in order to perform professional tasks such as conducting training sessions and seminars, creating web

content, designing promotional materials, managing communication campaigns and writing press releases.

- The **Communication Studies–General** concentration features flexibility and choice. Students create a personalized plan of study tailored to their specific academic interests and career goals. This concentration is appropriate for those who have diverse academic interests.
- The **Global Communication** concentration prepares students to play a powerful role in redefining the way the world communicates. Globalization is the result of communication. Strategic, culturally sensitive, and critical communicators are the cornerstones of global economics, business, political establishments, institutions, and cultural interactions. Now that a majority of institutions, organizations, and industries operate globally, the demand for communication professionals with a global perspective who have the theoretical, analytical and practical skills to understand communication across cultures and in diverse environments has increased dramatically. By emphasizing an ethical, mindful, and sustainable global outlook, the concentration in global communication exposes students to information management, comparative media systems, intercultural competency, international business adeptness, democratic communication values, and transnational justice. In addition to gaining knowledge and skill sets through courses, students are encouraged to participate in study abroad experiences to strengthen their learning. Global Communication graduates are prepared to play a powerful role in redefining the way the world communicates.
- Communication in **Media and Society** is an essential part of everyday life and interaction. Individuals, groups, and organizations use multiple media platforms and communication strategies to inform and influence the public's judgments, perceptions, values, and actions. Students in the Media and Society concentration will learn to create and carry out strategic messaging, enhance their media literacy skills, and participate meaningfully in civic society and a range of careers. The Media and Society concentration provides students with an understanding of media use, processes, and effects that is critical for success in a competitive marketplace. Students in this concentration are prepared to enter a large number of careers, including advocacy, marketing, and other strategic communication professions, legal and political fields, as well as new and emerging fields in social media management and promotion.
- The **Relational and Workplace Communication** concentration teaches students how to understand, evaluate, and create messages to organize and relate in professional, social, and personal contexts. Additionally, students acquire skills to promote diversity, leadership, ethics, perspective-taking, social-support, teamwork, and conflict management, leading to greater effectiveness in the workplace and in personal relationships. Taken together, students develop comprehensive communication skills deemed essential by top employers in today's competitive marketplace.

Programs in the College of Communication and Information are, by nature, innovative, interdisciplinary and collaborative, which is critical to both professional and scholarly disciplines. Students are educated to work at the intersections of communication, information and technology. Through a core of diverse theory- and practice-based courses, students learn basic concepts that apply across the range of college programs and develop a sense of professional expectations and build toward interdisciplinary thinking and application.

There are many study abroad/away opportunities. For more information contact the Office of Global Education or coordinator of the college's International Study Programs.

- Any COMM course taken is calculated in the major GPA.
- The School of Communication Studies generally will approve dual concentrations for Communication Studies students as long as there are at least 12 credit hours of coursework in the concentration elective courses exclusively applied to each concentration (resulting in a total of 24 credit hours of unique concentration electives across the two concentrations). Students must also complete all of the other concentration requirements specific to each concentration, in addition to differentiating their major elective courses across the two concentrations. If one of the dual concentration choices is either the Applied or the Global Communication concentration, students may select courses from across the College of Communication and

Information in their elective choices for completing that part of the dual concentration. Any other duplicative course requirements for the two concentrations beyond the requirements specified above may be double counted when completing a dual concentration option. Students electing a dual concentration must meet with an advisor to plan an individualized plan of study that meets these requirements before the dual concentration option will be approved for that student. Any changes made to the program of study also must be approved by an advisor, or the student may not be allowed to graduate with this option.

The Bachelor of Arts degree in Digital Sciences is designed to provide students with the ability to adapt and succeed in a rapidly changing digital world. The program provides a broad overview of digital technologies, often from multiple points of view. For example, a student may study the content and visual layout of a web page with a journalism professor and later study the programming aspects of a web page with a business professor. A course with an architect adds more material on design, and a course with a computer scientist adds additional programming skills. This multidisciplinary skill set adds the flexibility needed for many of today's careers.

Building on this broad overview, the program adds further depth in technical topics, societal issues, and project management. Students gain additional technical competency by studying information management, database systems and digital security. Finally, students learn how to work

on a team by studying requirements engineering, project management and team dynamics.

Programs in the College of Communication and Information are, by nature, innovative, interdisciplinary and collaborative, which is critical to both professional and scholarly disciplines. Students are educated to work at the intersections of communication, information and technology. Through a core of diverse theory- and practice-based courses, students learn basic concepts that apply across the range of college programs and develop a sense of professional expectations and build toward interdisciplinary thinking and application.

## Description

The Web Development minor allows students to develop the fundamental skills needed to pursue jobs in web development, web programming, web design and related fields. Students learn technical applications and skills in problem solving, design, user experience, creative applications, and programming. Students have the opportunity to use new and emerging technologies to design engaging multimedia experiences, improve existing systems, and study digital social structures. They will also gain experience working in diverse teams and communicating goals, needs, and processes to peers, clients, and consumers.

Web developers are software engineers who understand not only the full technological 'stack' that powers modern websites, but who are also conversant in and able to make connections between the design, content and business aspects of web development. Web developers work with content providers, visual designers, and user experience designers. They are coders who use languages such as HTML, CSS, Python, MySQL, PHP as well as frameworks used in web development such as Ruby or React. Web developers are also familiar with Content Management Systems, used to ensure that content and services can be delivered to end users.

**HI 60418 CLINICAL ANALYTICS II 3 Credit Hours**

As the volume and complexity of health data continues to grow, analysis of that data requires more advanced tools to transform that data into meaningful information for clinical decisions. Not only is data from electronic medical records (EMRs) growing at a rapid pace but new types of data are available for analysis, such as, genomic data and patient generated data. These advanced analytic tools break down into three areas, each of which will be examined in this course: new data warehousing techniques to manage big data, new analytic tools including cognitive computing and predictive analytics and new ways to visualize the data. All of these techniques transform the raw data into use cases, such as, population health, precision medicine and clinical decision support using artificial intelligence and machine learning which will also be addressed in this course.

## Description

The Master of Science degree in User Experience Design prepares students for careers that require them to apply a solid understanding of usability, content strategy, information architecture and user research.

The user experience designer engages in a variety of design activities that help produce usable interfaces and help organizations meet business goals. User experience design addresses the structural, informational, psychological and emotional aspects of what makes a

successful user interface, whether it is Web, mobile, tablet or any other device.

At Kent State University, user experience design is thought of as a process where students learn, understand, imagine, evaluate and inform. The design team begins by gathering data/information about users, clients, the organizational culture, common tasks and work environments. After sufficient data/information is gathered, the team seeks to understand the context in which the project will be undertaken. This phase is the bridge between data collection and design. Design in the imagine phase involves brainstorming, iterative prototyping and critiquing. The design team needs to constantly evaluate their designs to see if they work in the real world. This may involve activities such as paper prototyping, high-fidelity interactive prototyping and usability testing. The results of design must be communicated to appropriate audiences. This informing process involves giving presentations to clients and stakeholders, report writing and other forms of communication.

## Description

The Master of Arts degree in Journalism and Mass Communication is designed to give students a solid background in preparation for a professional career. Students are able to take a mix of online and face-to-face courses that allow them to craft a graduate degree that reflects their career interest. Courses are dynamic, challenging and professionally relevant. With small class sizes, students are able to learn from their professors and from the experiences of their fellow classmates, many of whom are working media professionals or nationally recognized journalism educators.

The Journalism and Mass Communication major offers the following optional concentration:

- The **Journalism Education** concentration is intended for those seeking to teach or advise student journalists. The program is affiliated with Kent State's Center for Scholastic Journalism, and faculty include some of the most-recognized high school journalism educators in the country. The coursework focuses on concepts and lessons that can be used in a teacher's classroom right away

The School of Journalism and Mass Communication provides its students with a strong foundation to achieve their goals in the rapidly changing media industry. All students take a series of core courses that provide the foundation for a journalism and mass communication career and develop a specialization through the selection of elective courses that can be within or outside of the school. One student may choose to hone skills as a multimedia journalist focusing on public affairs, while another may seek to develop expertise as a public relations professional for not-for-profit organizations. All students will work with an advisor to plan a course of study that meets their professional needs.

## Description

The Bachelor of Science degree in Public Relations leads students to many career paths, from corporate boardrooms and creative agencies to sports arenas, the halls of Congress, global nonprofits, hospitals, fashion runways, and well beyond. Graduates leave grounded in the practice of responsible advocacy with a firm grasp of inclusive communication practices necessary in 21st century workplaces. Kent State boasts the only public relations program in Ohio that is both certified by the Public Relations Society of America (PRSA) and accredited by the Accrediting Council on Education in Journalism and Mass Communication (ACEJMC).

The public relations major is rooted in professionalism, with a focus on developing writing and critical thinking skills and building students' understanding of multimedia storytelling. Students develop skills in written, digital, verbal and visual communications, as well as in research and measurement of communication effectiveness. Students are trained to deliver messages through social media, websites, podcasts, videos, press releases and other media tools, events, speeches, printed materials, public policy and more.

Numerous hands-on learning opportunities allow students to develop plans, strategies and tactics that would be produced in the public relations field. Often, projects relate to actual client communication challenges. In campaign projects, students complete research and create and present a public relations plan for a real client. In addition, they are required to complete 150 hours of a professional internship.

Public relations students have numerous opportunities to gain relevant experience. They can apply for positions at two student-staffed agencies, Flash Communications and IdeaBase. Flash Communications is a student PR agency located in Kent State's University Communications and Marketing division and managed by a full-time PR faculty member. IdeaBase, an integrated marketing and communications firm, is staffed by students majoring in public relations, advertising, design and other disciplines. Public relations students are often recruited to apply their skills at a range of campus jobs. Students are encouraged to become part of Kent State's nationally recognized independent student media, which provides opportunities to work on Kent State's newspaper, news site, TV station, magazines and radio station.

Students also have the opportunity to be involved with the award-winning Kent State Chapter of the Public Relations Student Society of America (PRSSA). In October 2019, the chapter received the Outstanding Chapter Award at PRSSA's national conference, the second time since 2014 it received PRSSA's highest national honor. Kent State's chapter is one of only 12 'star' chapters in PRSSA and has received nine national awards in 10 years.

Programs in the College of Communication and Information are, by nature, innovative, interdisciplinary and collaborative, which is critical to both professional and scholarly disciplines. Students are educated to work at the intersections of communication, information and technology. Through a core of diverse theory- and practice-based courses, students learn basic concepts that apply across the range of college programs and develop a sense of professional expectations and build toward interdisciplinary thinking and application.

There are many short- and long-term study abroad/away opportunities. For more information contact the Office of Global Education or CCI's coordinator of International Study Programs.

## Description

The Bachelor of Arts degree in Visual Communication Design prepares students for the graphic design and illustration professions. Students develop technical understanding and design skills in the organization of imagery and typography to communicate information in two-dimensional and three-dimensional forms. Students produce work for print, motion, video, screen displays, and interactive experiences, as well as package design, exhibition design, and environmental wayfinding.

This program focuses on design and illustration in the context of a broad liberal arts program, giving students the flexibility to choose 20 percent of their coursework (with guidance). This provides the opportunity for students to take a variety of courses to complement their design degree. Students learn at the intersections of communication, information, and technology.

Through a core of diverse theory- and practice-based courses, students learn basic concepts that apply across the range of college programs and develop a sense of professional expectations and build toward interdisciplinary thinking and application.

There are many study abroad/away opportunities. For more information contact the Office of Global Education or coordinator of the college's International Study Programs.

## Visual Communication Design - B.F.A.

### College of Communication and Information

School of Visual Communication Design

241 Taylor Hall

Kent Campus

330-672-7856

vcd@kent.edu

www.kent.edu/vcd

## Description

The Bachelor of Fine Arts degree in Visual Communication Design prepares students for design and illustration professions. Students develop technical proficiency and design expertise in the organization of imagery and typography to communicate information in two-dimensional and three-dimensional forms using interactive media, as well as environments and motion graphic design. Students produce work for print, video, screen displays and interactive experiences, as well as package design, exhibition design and environmental wayfinding.

This major leads to a professional degree and focuses on intensive work in the visual arts. The B.F.A. degree consists of approximately two-thirds of the coursework in the creation and study of the visual arts, with the remainder in liberal/general studies. Because of the greater emphasis on upper-level studio courses, the B.F.A. degree allows students an opportunity to build greater expertise in a given area of the field.

There are many study abroad/away opportunities. For more information contact the Office of Global Education or coordinator of the college's International Study Programs.

### Fully Offered At:

- Kent Campus

## Accreditation

National Association of Schools of Art and Design

## Admission Requirements

Admission to this major is selective. The Bachelor of Fine Arts requires a minimum 2.700 GPA in major, 2.000 GPA overall calculated after the completion of VCD 33000.

The School of Visual Communication Design recognizes that competence in visual design as well as intellectual capacity are necessary qualities in students who plan to prepare for a career in visual communication design. Therefore, the right is reserved to require evidence of achievement in design and related areas from all students endeavoring to enroll for the first time as majors in the school. Early admission is recommended.

Each transfer student will be evaluated individually in terms of his or her ability to perform within the program. A transfer applicant's strengths and deficiencies will be considered and his or her transfer credits will reflect that consideration. The director of the School of Visual Communication Design may impose additional requirements considered reasonable and necessary.

### English Language Proficiency Requirements for International Students:

All international students must provide proof of English language proficiency (unless they meet specific exceptions) by earning a minimum 525 TOEFL score (71 on the Internet-based version), minimum 75 MELAB score, minimum 6.0 IELTS score or minimum 48 PTE Academic score, or by completing the ELS level 112 Intensive Program. For more information on international admission, visit the Office of Global Education's admission website.

## Program Learning Outcomes

Graduates of this program will be able to:

1. Demonstrate an understanding of the ethics (and legal issues) closely associated with fields of visual communication.
2. Demonstrate an understanding of traditional hands-on skills relative to craftsmanship. Students will demonstrate an understanding of the basic use of digital technologies as they relate to their areas of study.
3. Demonstrate an ability to create visual response to communication problems, including understanding of hierarchy, typography, aesthetics, composition and construction of meaningful images.
